Sapphire Abrasion & Cold Light Treatment

The treatment begins with Sapphire Abrasion. Sapphire granules cover a unique abrasion tip, this crystal and suction-free system. It uses vibration to painlessly ablate the outermost layers of the skin. Revealing the healthier layers beneath and because this is a suction-free and non-thermal treatment, it can be used to treat a wide variety of skin conditions.

Clients experience not only a dry exfoliation but also a wet abrasion, resulting in immediate improvement in the skin's texture, tone and appearance. Three different head sizes are available providing a range of grit sizes. Depth of the exfoliation is controlled by the level of pressure & grit size chosen.

Lymphatic drainage follows your Sapphire Abrasion. The lymphatic system has no pump and is dependent upon muscle contractions, stimulations, and deep breathing to drain properly. Our unique lymphatic drainage process speeds up the removal of toxins, metals, inorganic substances and other waste products in the skin while it

detoxifies and regenerates new tissue and cells. Using the reverse side of the Sapphire tip, and changing from vibration to a pendulum motion, the lymphatic system is massaged.

Concentrated Red Monochromatic Light therapy follows. The 660nm wavelength of the red light stimulates the production of ATP, which is the major carrier of energy to all cells, expediting the replacement of older or damaged cells. In addition, the stimulation of the fibroblasts in the connective tissue produce collagen which enhances the elasticity and firmness of the skin. The green light is 530 nm and assists clients with rosacea.

The final step of the Sapphire Photo Abrasion treatment is the 450nm blue light therapy. We have shown that blue light is excellent for lifting sagging skin, particularly around the eyes. In addition, blue light oxygenates the cells which greatly reduces the levels of acne causing bacteria leaving the skin glowing!

Additionally clients receive a gentle Micro current combined with the concentrated red cold light which stimulates muscle toning.

"I couldn't believe how much of a difference this made on the look of my face! My eyes looked 20 years younger after just one treatment. I've been hooked ever since!" MC

Treatment Description

SKIN RESURFACING

Brad Pitt, Madonna and Brittany Spears are all fans of Microdermabrasion. And for good reason. Each session is mild, but over a course of treatments, the result is smooth healthy skin that has a youthful radiant glow. A full laser peel will produce the same results, but there is significant risk and down time associated with a full laser or chemical peel. On the other hand microdermabrasion is safe and controlled and the end result is practically the same.

COOL-LIGHT TREATMENT

This truly remarkable, anti-aging treatment utilizes our exclusive cold laser to reduce fine lines and wrinkles without the pain, tissue damage and downtime associated with medical laser treatments. Safe and effective for all skin types. The treatment is quite pleasant and relaxing and we combine it with deep hydration to provide immediate results, while in the tissues, the long term results develop.

ANTI-AGING *(collagen regeneration for fine lines and wrinkles)*

The Cold Light stimulates your own cells to produce more collagen and elastin. In turn, this firms and tones the skin and so significantly reduces the most visible signs of age. Several treatments can dramatically fade crow's feet around the eyes, smooth the dark circles, and protect the skin against free radicals and soften scars. The treatment is proven to help with lifting, tightening and firming the facial muscles and smoothing fine lines.

ACNE TREATMENT

Microdermabrasion prevents and corrects thickening of the stratum-corneum, eliminating congestion and smoothing the irregularities. Cold Laser applies light in the blue spectrum which kills the bacteria and stimulates the dermis. A serum is applied to make the bacteria more photo-sensitive. The result is accelerated healthy cell renewal which clears your complexion. Our technicians are trained to assess individual skin conditions and apply the most effective therapy.

PIGMENTATION AND SUN DAMAGE

This treatment is designed to treat hyper-pigmentation such as freckles, pregnancy masks or age spots. COLD-LIGHT in conjunction with a skin lightening epi-gel is applied to the target areas. Melanin cells are stabilized and as the skin goes through it's cycle, the hyperpigmented areas fade and blend.

SCAR AND STRETCH MARK TREATMENT

Visibly soften and reduce the appearance of stretch marks and minor scars with a program of MICRODERMABRASION to smooth the surface and COLD-LIGHT restore collagen and elasticity.

ROSACEA AND PSORIASIS

Microdermabrasion cannot be applied where these conditions are present. Superficial red and purple veins (vascular lesions) under the skin's surface are corrected by COLD-LASER therapy. It will clear your blemishes and improve your skin texture and tone with quick and easy treatments.

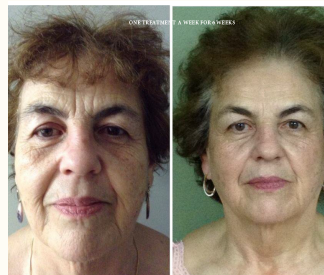

CELLULITE BODY TREATMENT

Cellulite is caused by poor circulation. Cold Light therapy oxygenates your cells, allowing your body to stimulate your circulatory system to break down the unsightly bumpy skin. Your skin will be smooth and tighter from just one treatment.

1 Treatment a week for 6 weeks

1 Treatment a month for 1 year

CUSTOMER TESTIMONIALS

Our clients are excited about the results we've provided for them. Here is some of what they have to say:

I recently had a full surgical makeover and I've now got my real shape back. Thanks to the Medspa Anti-Aging Facial, I've now got the younger looking skin to match. It's truly remarkable. And I fit the treatment into my lunch hour!

S. I

A friend recommended Medspa Therapeutics and I tried their Anti-Aging Facial. Oh.. My.. God! My husband says I look 10 years younger. Thank you so much. I've referred 3 of my friends after they asked if I had had a face lift.

K. H.

Our son has cystic acne which has created hardened scarring on his chin, and was spreading to his forehead. Patricia recommended microdermabrasion for the scarring and cold laser with their acne gel for the breakouts. The therapy has been very successful at eliminating the scars and his complexion has cleared up to the point where it's hardly noticeable. Our son has regained his confidence. Thank you.

Acne Results

1 Year Later

In 3 months, my face has been transformed by both Cold Light, and Digilight. I have attached some photos to share my progress with you. I am so happy to look in the mirror and recognize the young lady staring back and I am thrilled to be able to touch my face and feel how smooth and soft my skin can be again!! **MR**
